

**MAGNESIUM
MINERAL POOL**

PRODUCT BROCHURE

EXPERIENCE THE
MAGNESIUM POOL
OF THE FUTURE.

ABOUT US

Cyberpools was established with the mission to create the swimming experience of the future with the latest pool technology and design. Like our name, Cyberpools is the new expression of a high-tech and futuristic lifestyle.

Our Magnesium mineral pool is created to be healthier, safer, and more pleasurable for you and your family. By providing fully customised pool solutions that combine functionality with industry leading standards, we deliver the pool of the future today.

WELLNESS & LIFESTYLE

Cyberpools harness the same natural minerals found in the Dead Sea, which has been renowned for mineral bathing and its "health-giving" water over centuries. The premium blend of Magnesium and Potassium in Cyberpools creates the best water clarity, comfort, and health benefits for your every swim. From the very first moment you jump into a Cyberpool, you can feel the difference.

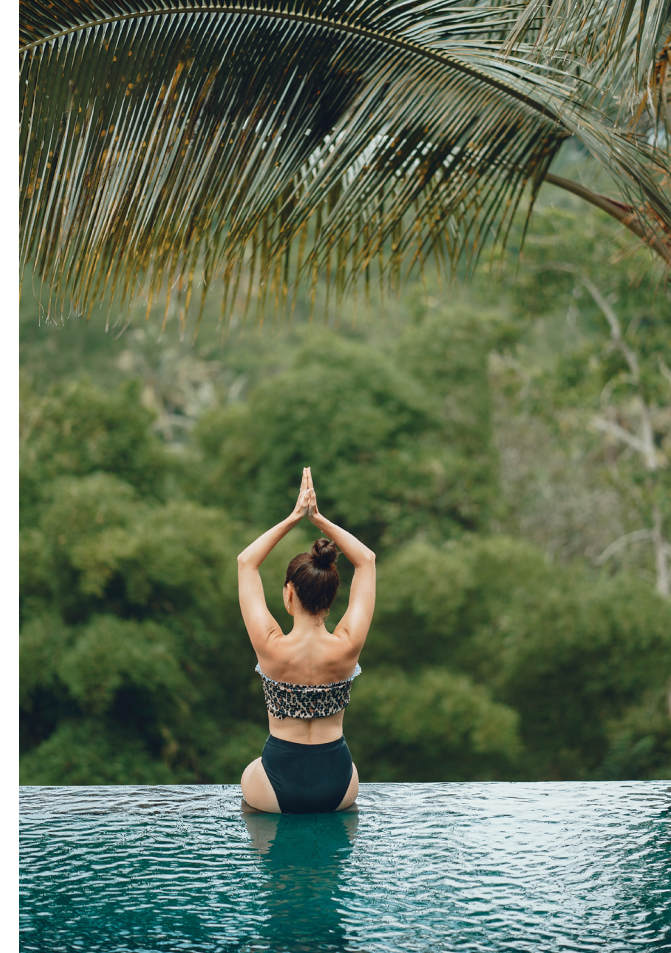

An evolution in swimming experience

Cyberpools' breakthrough pool technology creates a life-changing swimming experience. Cyberpools **eliminate** problems common in traditional salt water or chlorine pool such as **green water, stinging eyes, itchy skin and harsh chemical smells**, utilising its unique Magnesium system. The Magnesium in the water acts as a natural flocculent, binding with debris so they can be caught by the filtration media more easily. As a result, Cyberpools allow you to experience swimming in **comfortable, silky smooth and crystal clear water**.

The healthiest and safest water to swim in

Unlike other chemically dosed or salt-water pool systems which are more drying to your skin and hair, the Magnesium content in a Cyberpool actually leaves your skin and hair feeling softened and moisturised. This is particularly beneficial for people with sensitive skin such as children and those with skin conditions such as **Rosacea, Acne, Eczema and Psoriasis**.

Cyberpools also play a vital role in improving your overall well-being. Swimming in a magnesium pool has been proven to help with **detoxifying the body, retaining minerals, reducing stress, and enhancing rehabilitation outcomes** for individuals with diverse ailments. So give your family a bigger investment in health and a quality lifestyle.

SPORT & FITNESS

Cyberpools help athletes train and ultimately stay in the game. The Cyberpools Magnesium pool is designed for the athletic family or individual that demands frequent all-over workouts as well as effective sports recovery. Cyberpools have got all the functionality you need in one to level up your performance.

STRONGER.

Bridge from training to sport recovery

Magnesium supplementation has been widely recommended to improve exercise performance and aid in sports recovery. Studies indicate that the need for Magnesium increased as individuals' physical activity levels went up. The Magnesium mineral in Cyberpools makes it a superior choice if you're a physically active individual, especially athlete. Here's how Cyberpools can support you at every stage of your sport:

BETTER MAGNESIUM ABSORPTION

Magnesium is absorbed directly through the skin (transdermal absorption) with every swim, which is suggested to be more effective with nearly 100% absorption and fewer side effects than oral application.

SPORT RECOVERY

Swimming in a Magnesium pool helps to improve overall flexibility, avert injury and relieve aches such as joint pain, muscle soreness and cramps, which supports athletes from pre-workout warm-up to post-exercise recovery.

IMPROVE ENDURANCE

Increasing Magnesium in your body can reduce lactate accumulation in the muscle, so you can get back to working out quicker and build up your endurance more effectively.

CONSTRUCTION ENGINEERING

Cyberpools are leading the way in pool design, construction and innovation. Our in-house team of engineers and construction specialists design the Cyberpools to withstand the test of time. Utilising the highest grade materials, we over-engineer the construction to ensure ultimate rigidity. So you can enjoy the pleasurable experience of owning a Cyberpool for decades to come.

Advanced Equipment

ENVIRONMENTALLY FRIENDLY POOL

Cyberpools water is rich in Magnesium and Potassium. Both are used in commercial agricultural applications and are beneficial to plants and soil. Once diluted (we recommend a dilution of 5 parts fresh water to 1 part backwash water), the water from Cyberpools is safe to use in your garden and can help promote plant growth.

HYDROXINATOR CONTROLLER

The Cyberpools control system is fully automated featuring a reverse polarity cell that helps keep cleaning and maintenance to a minimum. Smart temperature sensing automatically regulates output in cold water to prevent excessive energy and cell wear. The system is connected to a variable speed pump that further reduces energy consumption and is controlled by the iAqua Link app.

GLASS FILTRATION

Zodiac Filter Crystals are made from 100% recycled clear glass and are part of what makes the Cyberpools special. The crystals are a type of pool filter media that act as a direct replacement for sand or zeolite. Sand filtration, although very popular, does have many limitations, such as potentially harmful bacteria growth, inefficient backwashing and additional strain on the sanitiser. The glass crystals discourage bacteria resulting in a healthier filter tank.

UV SANITISER

The Cyberpools UV sanitiser harnesses the power of ultraviolet light to provide an additional layer of protection to the pool, boosting its sanitisation capabilities beyond the levels usually provided by typical chlorine or salt generator solutions and is more efficient.

Let's get started

- 1. CONTACT CYBERPOOLS**
Book your free design consultation today
- 2. ONSITE MEETING**
Our pool advisor will discuss the solution that best suits your needs
- 3. ENGINEERING DESIGN**
Our in-house team will design your pool and obtain all approvals
- 4. CONSTRUCTION & OPERATION**
We construct your pool and teach you how to make the best use of your Cyberpools
